ADHL Central

ADHL Conceptual Architecture

- This is a 'possible future' for the ADHL Library.
- OAI-PMH and/or REST based API could be used for interoperation between the nodes and the central node.
- 'Value-added' services such as dashboards could be incorporated at the central node.

Type of Aggregation

- Asynchronous :
 - OAI-PMH
- Synchronous
 - REST API

Asynchronous

- Individual nodes :
 - Deploy AOI webapps
 - Share appropriate Sets
 - Regular update OAI index
- Central
 - Install harvester
 - Indicate target Data Providers (nodes)
 - Regular metadata harvesting
 - Provide search interface

Synchronous

- Individual nodes
 - Deploy **rest** webapp
 - Permanent internet access
- Central node
 - Develop aggregator
 - Provide search interface
 - Search target repositories
 - Merge content

ADHL Conceptual Architecture

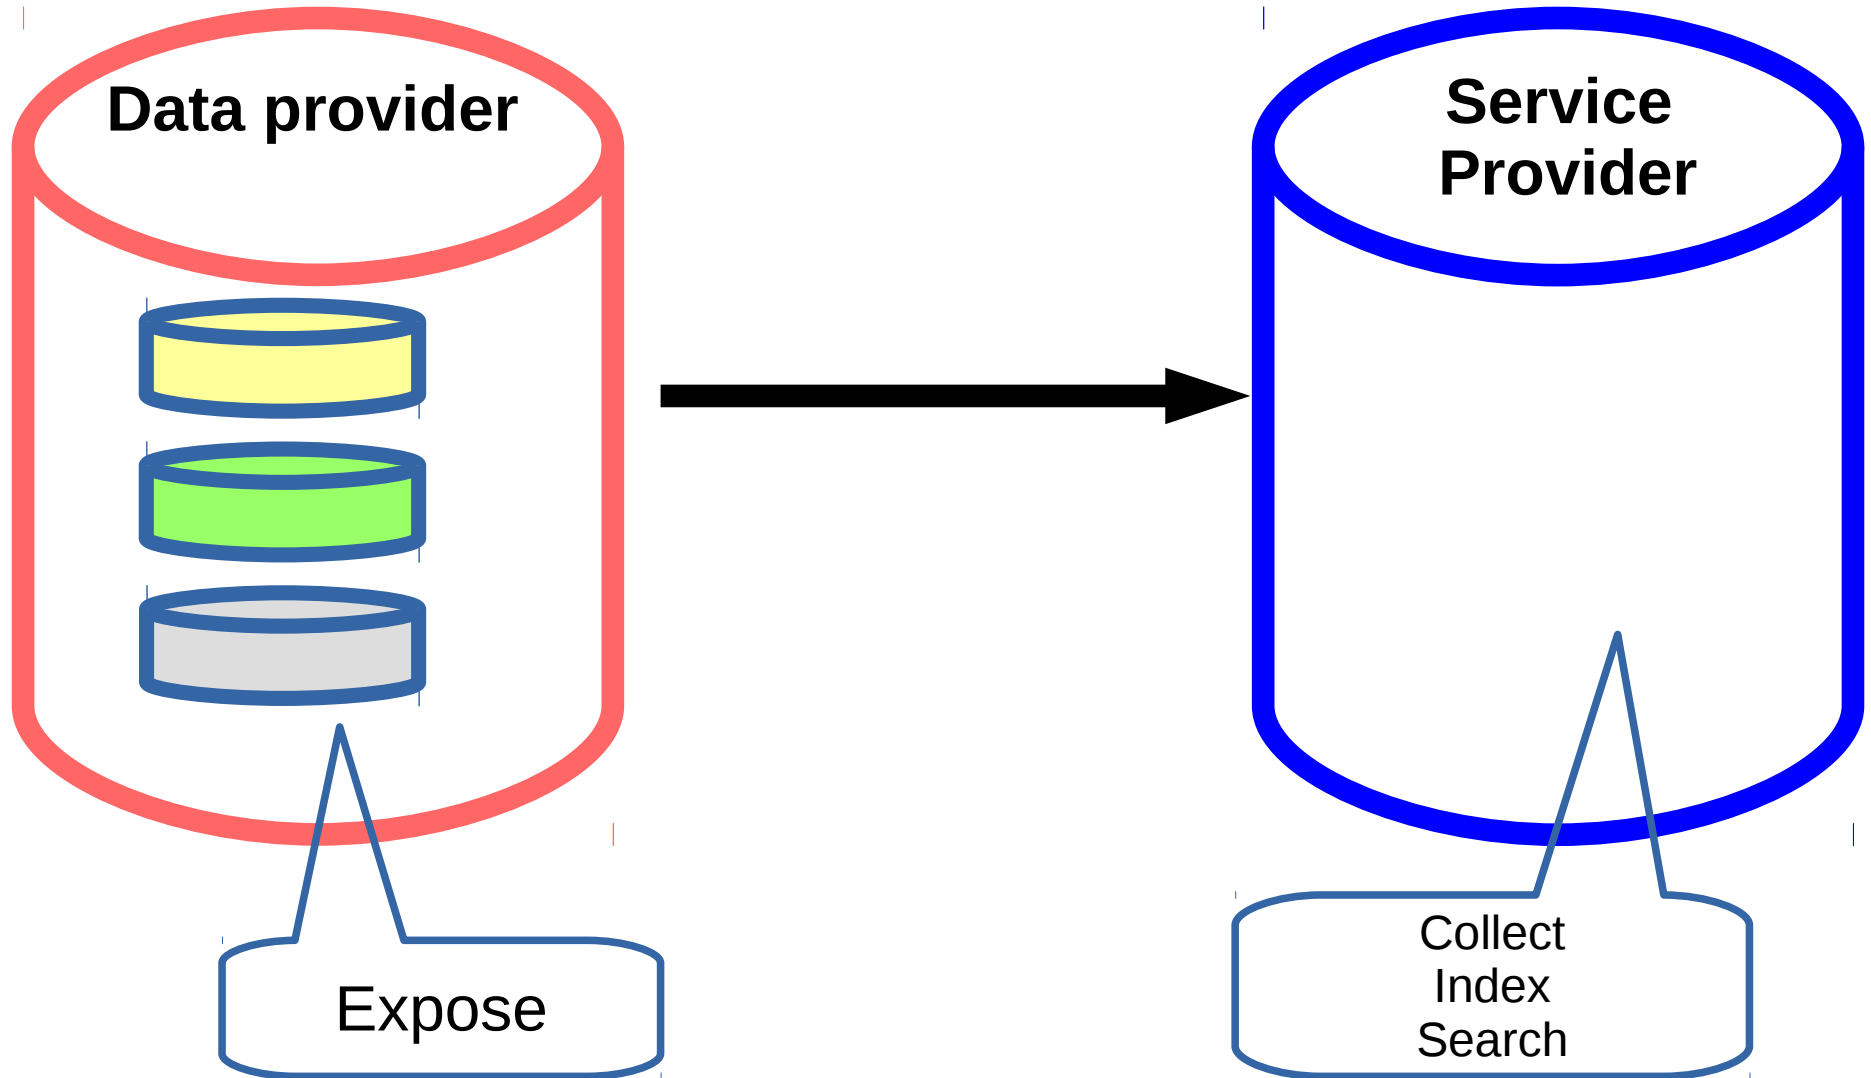

- This is a 'possible future' for the ADHL Library.
- OAI-PMH and/or REST based API could be used for interoperation between the nodes and the central node.
- 'Value-added' services such as dashboards could be incorporated at the central node.

OAI - PMH

- Open Archive Initiative Protocole for Metadata Harvesting
- Language for servers to talk to each other
 - In order to exchange metadata

OAI Servers

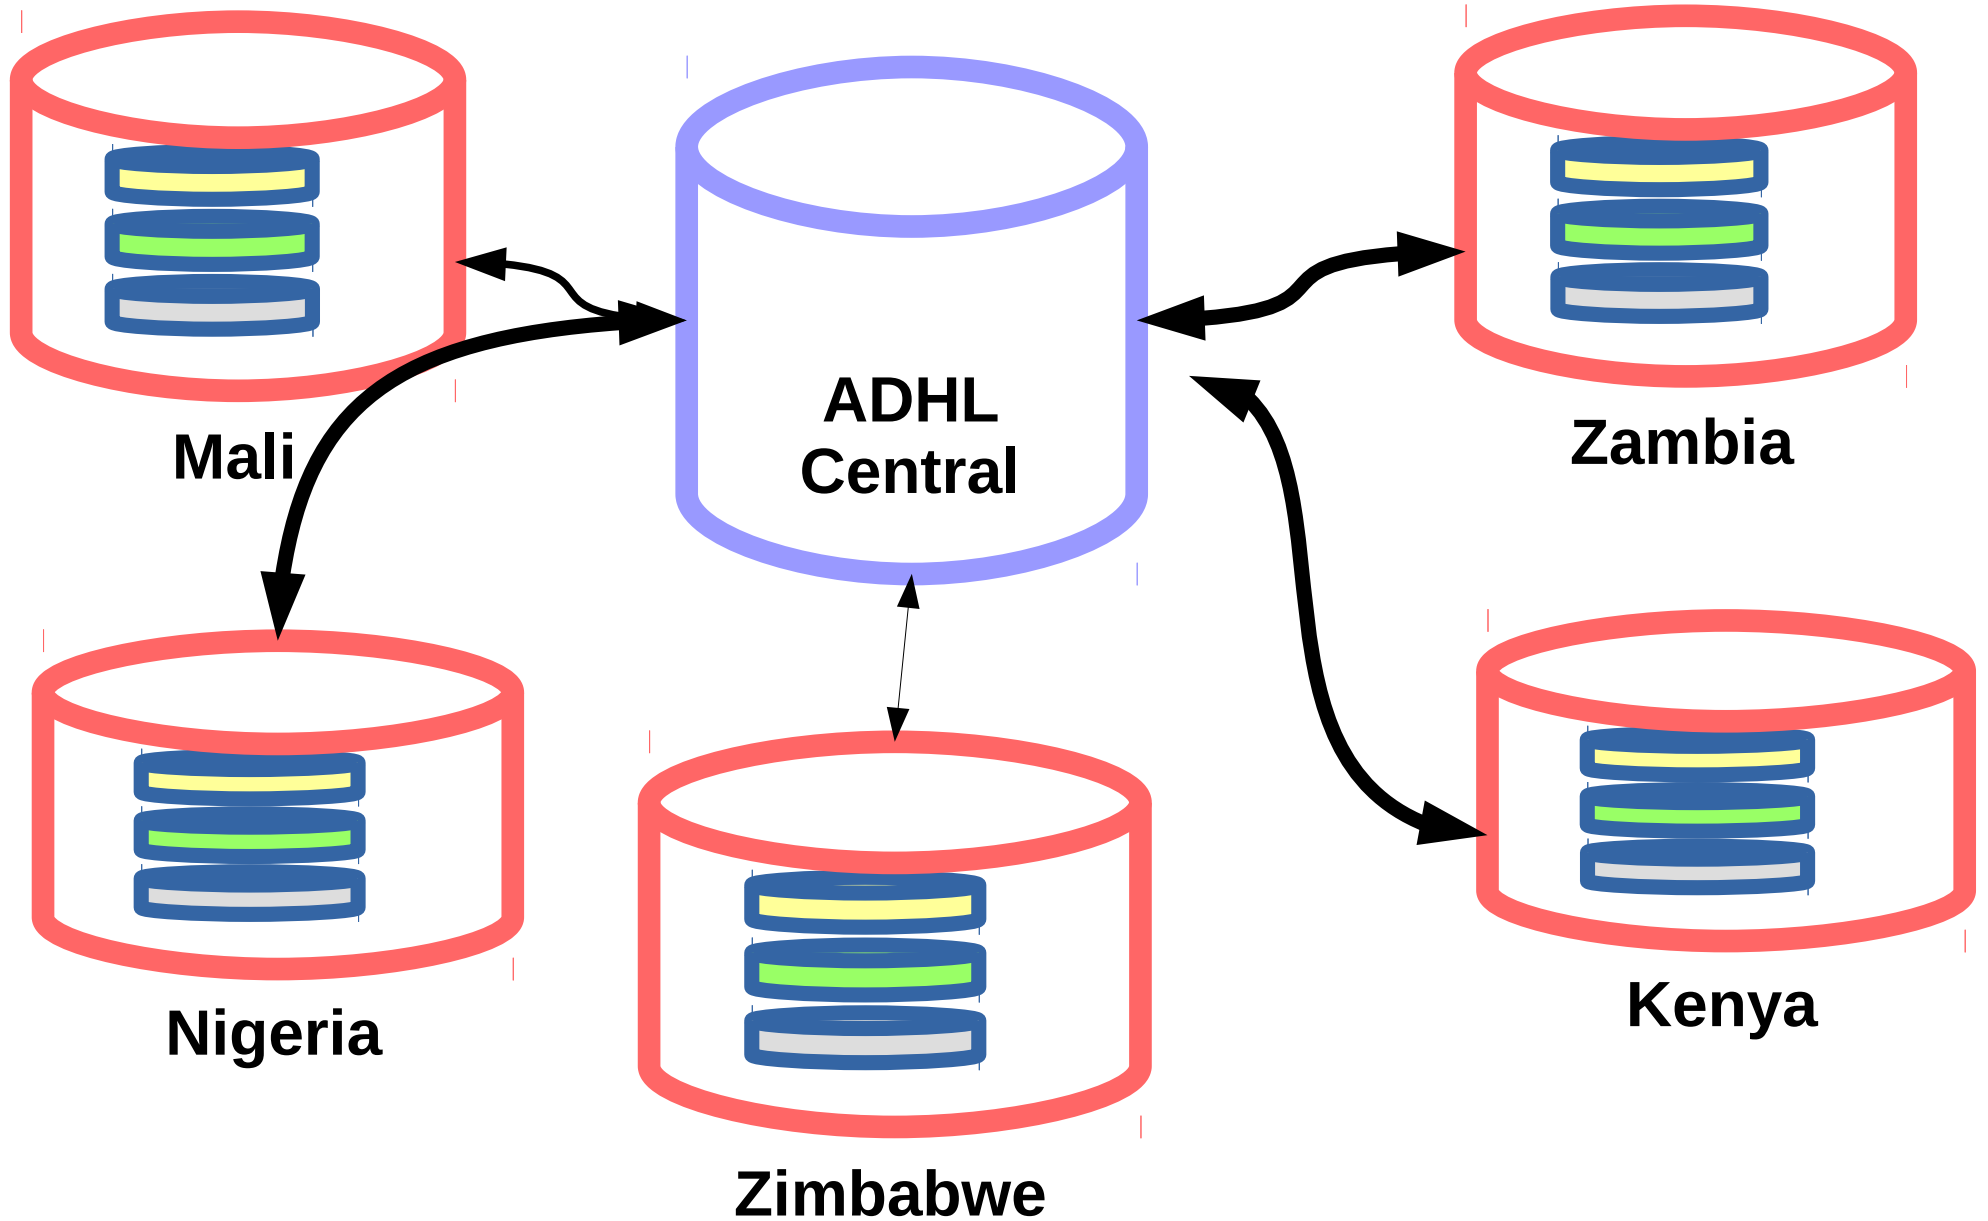

Terminologie

- **Data provider** : Server exposing metadata
- **Service provider** : harvest metadata and build value-add services (searching)
- **Repository** : Collection of resources available on data provider
- **Set** : Group of similar documents
- **Moissonner** : Collect/import data from other repositories
